Complete the answers to the questions below to complete your project report. Create a PDF of the completed document and submit the PDF with your project.

Question	Your answer:
Step 2: Domain Choice What domain did you choose to fine-tune the Meta Llama 2 7B model on? Choices: 1. Financial 2. Healthcare 3. IT	2. Healthcare
Step 3: Model Evaluation Section What was the response of the model to your domain-specific input in the **model_evaluation.ipynb file**?	Genomic characterization is essential for > understanding the biology of tumors and for selecting the most appropriate treatment for each patient. Adaptive immune response in cancer Immune system and cancer Immune system and cancer therapy Immunotherapy and cancer Intratumoral heterogeneity The immune system
Step 4: Fine-Tuning Section After fine-tuning the model, what was the response of the model to your domain-specific input in the **model_finetuning.ipynb file**?	Genomic characterization is essential for > [{'generated_text': ' clinical decision-making in patients with inherited retinal disease (IRD). We developed a novel method, termed “DNA-sequencing-based phenotyping,” for genotype-phenotype correlation in IRD. Genetic diagnosis in patients with IRD is often challenging,'}]
